Integrating Disaster Risk Reduction into ICH Inventorying

U064 PowerPoint presentation

UNESCO
Intangible Cultural Heritage Section

United Nations Educational, Scientific and Cultural Organization · Intangible Cultural Heritage

In this presentation …

Goal: Learn how to apply a community-based approach to the inventorying and safeguarding of intangible cultural heritage in the context of disasters.

Building on the knowledge acquired in Unit 63, this unit provides frameworks, tools and exercises to integrate disaster awareness into the inventorying and safeguarding of ICH.

Coverage:

- Brief recap of previous Workshop (Unit 063)
- Identifying ICH in Disasters – case study of ICH and disaster, and a framework for analysis
- Exercises – integrating disaster awareness in community-based inventorying, and inventorying ICH for Disaster Risk Reduction
- Preparation for Group Exercise
- Cultural permissions and FPIC

Key Lessons of the Operational Principles and Modalities

1. **ICH, in a disaster context:**
   - has a dual nature (vulnerability and risk reduction)
   - requires an assessment of vulnerability, and emergency safeguarding measures, plans and funding
   - can be deployed in all phases to mitigate the impacts of disaster
2. **Actors, who need to be involved and in communication with each other, must include:**
   - communities (central to the identification and safeguarding of ICH)
   - states parties and national agencies
   - disaster relief and risk reduction managers
3. **Planning and assessment, in all phases, must involve:**
   - input from and adequate resourcing of all actors, especially communities
   - consideration, integration and incorporation of ICH safeguarding and mitigation at all levels from local to national (including PDNAs)
   - sharing of information and results across all levels

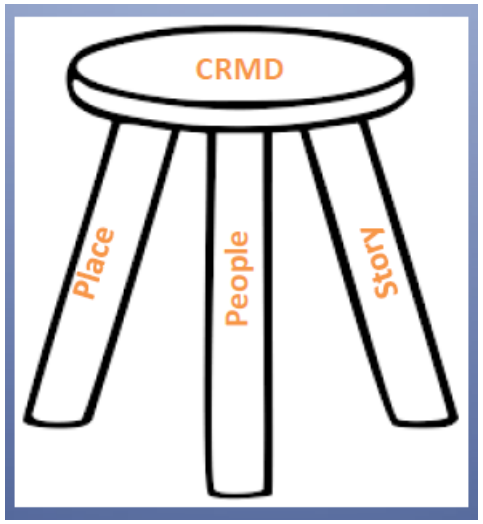
Identifying ICH in Disasters: “People, Place, Story” – a framework for analysis



“People, Place, Story” is a model that helps us to understand the connections between a living community, its physical environment, and its local knowledge.

Distinguishing between the human, tangible and intangible aspects of all ICH allows us to better understand how ICH is transmitted, where it is vulnerable, and thus the challenges and requirements of safeguarding.

People are the human agents of ICH (individuals, communities, bearers, ancestors)

Place is the tangible, material world (landscapes, buildings, artefacts, resources)

Story represents the immaterial or the intangible (knowledge, narrative, tradition, language).

United Nations Educational, Scientific and Cultural Organization · Intangible Cultural Heritage

Identifying ICH in Disasters: Articulation, Transmission and Safeguarding

The three different **Modalities** (People, Place, and Story) come together in the **Articulation** of actual, dynamic acts of performance, practice or production of ICH.

Transmission is the communication of that ICH (as knowledge and practice) across both space and time.

Safeguarding refers to the full suite of strategies (from local through to international) that understand and aim to support and enhance the viability of each of the different components of the “People, Place and Story” framework.

Identifying ICH in Disasters: the People, Place, Story Framework

Handout 1: People, Place, Story: a Framework for ICH Transmission and Safeguarding				
Modality	***Form →***	***Articulation →***	***Transmission →***	***Safeguarding***
People	Individuals, communities, agents, transmitters, transactors, institutions, states	Performance, expression, language, practice, mobilisation, production	**Space:** Intra-group, external, exchange, trade, theft, conquest **Time:** Inter-generational, monumental, archival	Local, national, regional and international strategies to enhance the viability of the forms, articulation and transmission of ICH
Place	Material or tangible settings, sites, environments, resources, settlements, objects, artefacts			
Story	Immaterial or intangible, knowledge, narrative, tradition

Identifying ICH in Disasters: Introducing the Case Studies

Through two Case Studies, we will explore and identify examples of:

a) the impact of disasters on ICH, and
b) the role of ICH in reducing or mitigating risk in disaster contexts.

The Case Studies include:

Case Study 1: Cyclones and ICH in Northern Vanuatu

Case Study 2: Mount Merapi, Indonesia: living on a volcano

Exercise 1: Impact of disaster on ICH

Learning objective:

- Apply a preliminary disaster risk analysis to the ICH element that your group selected in the previous Unit / Workshop

Method:

- Use the “People, Place and Story” framework to think about different kinds of ICH vulnerability, and exposure to different kinds of disaster
- How has the viability of your ICH element been impacted over a long period by one or more disasters or other emergencies?
- Record your example on Handout 2.

Handout 2: ICH Impacted by Disaster

Exercise 1 – ICH Impacted by Disaster		
Name of element	What kinds of disaster or emergency have impacted on this ICH element over time?	Which aspects of the element have been threatened or impacted? ▪ People? ▪ Place / Tangible resources? ▪ Story / Intangible resources? ▪ Practice? ▪ Transmission?

Exercise 2: Group Research on ICH Disaster Risk – goal and objectives

Goal:

To complete the ICH Disaster Risk assessment for a selected ICH element

This can be started during the workshop, or tackled later

Learning objective:

This exercise enables participants to consider:

a) the impact of one or more hazards and emergencies on the safeguarding or ongoing practice of one or more ICH elements

b) how the ICH might be mobilised during and after the hazard to mitigate the impact of disaster

c) how the ICH might be transformed by the disaster or adapted by its bearers

d) what measures need to be put in place to safeguard ICH and strengthen its transmission following disaster

United Nations Educational, Scientific and Cultural Organization · Intangible Cultural Heritage

Exercise 2: Group Research on ICH Disaster Risk – steps

Steps:

- Each group uses the same ICH element considered in last week's workshop and today's Exercise 1 - or chooses a new one (or several!)
- Confirm cultural permission or FPIC requirements associated with the selected ICH element(s)
- Each group meets to complete the remaining steps, doing further research as necessary
- Complete any gaps in Handout 1 from Unit 063, and in Handout 2 from this module
- Respond to the questions and prompts in Handout 3
- Present the full results for discussion

EXERCISE 2a: ICH Risk in each phase of the Disaster Management Cycle

This exercise allows your group to further develop Section 3 of the Sample Inventorying Framework “State of the ICH element: viability” (Handout 1 from Workshop 1)

Phase:	Response	Recovery	Preparedness
Threats to continued enactment			
Threats to continued transmission			
Threats to access to resources			
Viability of other ICH			
Safeguarding or other measures in place			
Safeguarding or other measures required			

CC BY SA

Exercise 2b: Role of ICH in Mitigating or Reducing Disaster Risk

Record any examples of a role for your ICH element (or any other related ICH) in any of the three phases of the disaster cycle:

1) ICH that is used to **prepare** for disaster
2) ICH that is used in the **response** phase of a disaster
3) ICH that is used to **recover** from disaster

Name of element	Preparedness	Response	Recovery

A self-test

Test yourself – now or later!

- What is the distinction between a natural hazard and a disaster?
- What are some of the reasons why impacts to ICH have been difficult to capture in Post Disaster Needs Assessments?
- What is the difference in emphasis between DRM and DRR?
- What are the different phases of the disaster cycle, and why are they different?
- How do the *Operational Principles* inform practical measures in each phase of the disaster cycle?
- Is there emergency financial or technical support available to support ICH safeguarding?
- How are the different modalities of ICH transmission and safeguarding brought together and articulated?
- Can you think of any critical issues for ICH inventorying and safeguarding in the context of disasters that have <u>not</u> been addressed in Units 63 and 64?
